

Baseline – Simply Good Light

The functional design of the highly efficient Baseline LED strip stands for the new simplicity in the retail trade. The system's lens optic makes for application-optimised light distribution combined with minimal investment and running costs. This wonder of efficiency is obtainable in lengths of one, two, three and four metres, according to requirement. External accessories, such as daylight and motion sensors, can also be added with the aid of a DALI control unit. The system requires just two suspension points per four metres, thus keeping installation costs low. The high-efficiency version generates 160 lumens from one watt.
